## Mentalix Demonstrates New ADF R3 Feeder at IAI

Mentalix announced its new high-volume solution for certified fingerprint card scanning in February (see https://mentalix.com/mentalix-launches-certified-high-volume-fingerprint-card-scans-on-newly-developed-mentalix-adf-r3-feeder/). Since that time, Mentalix has incorporated this device into its card conversion center and now the device is scheduled for presentation at the Annual IAI International Forensic Education Conference in Cincinnati, Ohio, August 7-13, 2016. The device will not only be used within Mentalix card conversion center, but it is also made available for purchase by integrators and end users. The device is currently the only practical feeder-based solution available for volume certified fingerprint card scanning. Mentalix has several patents pending on the device and its unique technology. See us at IAI or contact Mentalix Sales at info@mentalix.com or 972-423-9377, x128 for more information.

Innovative Card Scanning

Mentalix Completes Large Northwestern State Card Conversion Job

Mentalix recently completed a state-level conversion project that totaled well over a half million cards processed. Several states and other agencies have relied on Mentalix to process (in total) tens of millions of fingerprint cards. Mentalix works with states directly and also partners with AFIS vendors to provide card conversion services. Mentalix provides round-trip assistance in the conversion process, providing shipping containers and packing materials to customer site, and coordinating shipping to/from Mentalix card conversion facility. Mentalix inventories cards, barcodes cards, provides certified fingerprint and palm print card scanning, fulfills customer data entry needs, and reviews/validates all conversion work. All labor is performed in a secured facility with background checked employees in a Mentalix U.S. location. Complete and regular updated reports are provided to our customers on the progress of the conversion jobs and extensive reports are provided when electronic data is delivered to the customer.

Civil/Federal Promotion for Live Scan Systems

Mentalix is offering a free transport case or free swipe card reader product promotion to civil customers through September 30, 2016. See promotion details at http://mentalix.com/opm-promo

Recent Product Improvements

Updated Fingerprint Image Quality Assessment using recently released NFIQ 2.0

Mentalix has upgraded its Image Quality Assessment using the most recently technology release provided by NIST for Fingerprint Image Quality (NFIQ 2.0). According to NIST, NFIQ 2.0 provides a higher resolution quality score (in range of 0-100 according to the international biometric sample quality standard ISO/IEC 29794-1:2016 [6] as opposed to 1-5), lower computation complexity, as well as support for quality assessment in a mobile platform. The updated functionality adds immediate, noticeable benefit to the operator in providing quality scores that are more accurate and much less likely to flag prints that are of acceptable quality. The increased accurate alignment of quality assessment with the practical use of fingerprints in automated identification systems reduces operator effort and knowledge required in getting the highest quality results.

Fed Submit 3.1 Archive Station

Mentalix's **Fed Submit** low cost Archive Station stores up to 70,000 transactions that can be imported automatically using industry standard EBTS files generated from your existing card scan station, live scan station, AFIS, ULW, or other biometric compatible system. The archive system supports easy demographic data searches as well as local fingerprint/palm print identification matches. You can use your latent fingerprint photos and photo capture files to do finger print and/or facial searches in the archive database. The Archive Station works with third-party manufacturer products while enabling the end user to take full advantage of electronic information. Even third party digitized fingerprint card transactions can be easily loaded, enrolled, and indexed within the system. Additional workstations can be added that share single database. Live scan capture device, camera, card scanner, transaction annotations capability, increased transaction count, and many more options can be added to the system as needed.

Mentalix Customer Survey

Because of our commitment to our customer experience, we are actively seeking feedback on our performance and gathering information on how we can improve. We appreciate your participation and encourage you to help us serve you better. We have reached out to numerous customers with courtesy calls to participate in our survey and you can also give us feedback online directly at https://mentalix.com/customer-survey/

Mentalix 2016 Conferences

MAY 31 – June 2
Texas Division IAI Conference

JULY 23 - 25
Sheriff's Association of Texas Conference

AUGUST 8-10
International Association for Investigation (IAI) Education Conference, Cincinnati OH

AUGUST 28-31
NEC User Conference, Atlanta GA

SEPTEMBER 27-29
2016 CJIS (Criminal Justice Information Systems) Conference, San Antonio TX

OCTOBER 2-4
Texas Training Coordinators Conference (TCOLE), Corpus Christi TX

More Economical Card Conversion Option

Mentalix has had an abundant amount of customer interest in card conversion – conversion of historic paper fingerprint cards to electronic format for storage and retrieval in their Fed Submit database. Some of our customers have purchased additional card scan stations and they are using in house or volunteer labor to complete the card conversion process. This is a very economical route, but rate of doing manual card scan - a single card at a time - is extremely limited. Mentalix operates a bulk card conversion center to expedite the card conversion process. In addition, Mentalix is now offering a joint labor option to make this opportunity more economical to our customers. Instead of Mentalix doing preparation (including barcoding) and data entry work, Mentalix now supports a card conversion flow that allows you to optionally take on these labor intensive tasks in house and at your own pace and with in-house resources. Data entry can be performed incrementally with your in-house labor resources even after card conversion is fully completed. This enables fingerprint images to be available for matching within the customer system immediately after the conversion process. The new card conversion option allows Mentalix to offer a considerably more practical and cost-efficient per card pricing model. If you have ever considered card conversion or you are currently making slow progress at converting cards, contact Mentalix for details on this more economical card conversion option.
