

Fed Submit™ (Mug Shot Add-On)

Overview

The Fed Submit Mugshot (Add-On) is an additional capability that allows law enforcement agencies to capture and store photos for various identification transactions. Photo capture can be used in addition to electronic fingerprint scanning, which increases identification accuracy, and allows for facial recognition capability.

Fed Submit facial recognition capabilities can be accessed and utilized with both Mentalix's Release verification and Remote ID products. Photo capture and facial recognition are changing the way people are identified and processed by making processing quick, easy, secure, and most importantly, accurate.

Facial recognition capability is now in use in some government AFIS systems, and some states strictly require photo capture with all criminal transactions. Products that utilize facial recognition ensure that agencies can accurately identify a person in the database by facial features. In some cases, facial recognition in these products can even replace the need for fingerprint identification.

Features

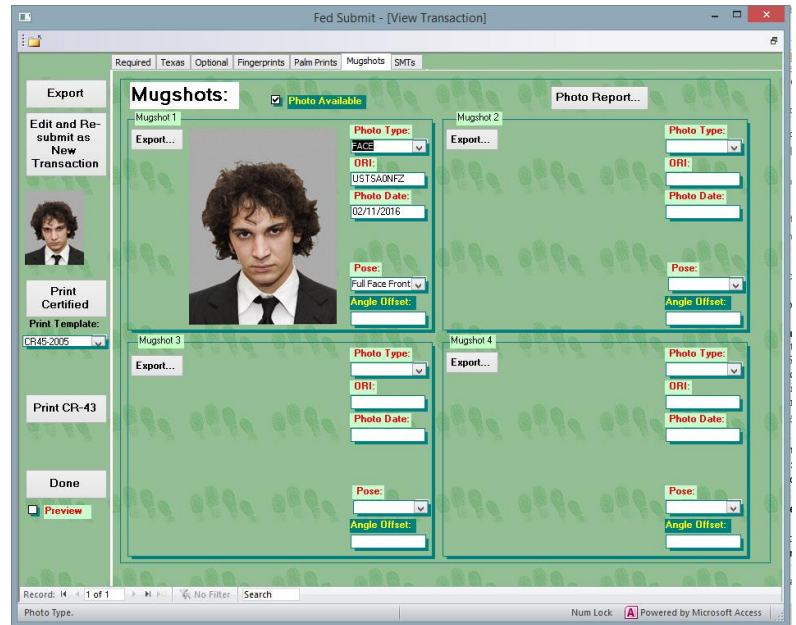

- Control of camera through Fed Submit Mug Shot software
- 18 megapixel camera
- Up to 4 mug shot images (front, two profiles, and a side view)
- Up to 12 photos for scars, marks, and tattoos
- The ability to import photos
- Capture of photos for facial recognition
- FBI-certified card printing on blank card stock or pre-printed fingerprint cards 500 ppi FBI certification
- FBI-certified WSQ Version 3.1 compression
- Custom data entry & field checks
- **Fingerprint-based matching capability within local database** for searches or inmate release verification
- Adult & Juvenile submissions

Benefits

- High-quality photos
- All of the capabilities of Fed Submit
- Storage of multiple photos allows for more accurate identification and facial recognition
- When paired with Mentalix **Release Verification** and/or **Remote ID**, agencies can utilize mugshot and facial recognition technology to streamline identification processes.

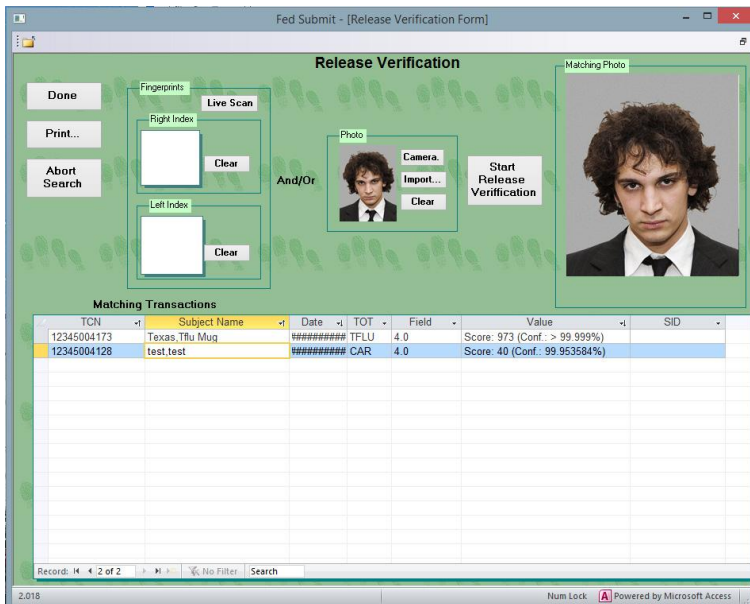

Texas Customers: DPS now requires that agencies submit a Type 10 photo for all SOR and Law Enforcement Applicant submissions. Although it is not yet required, photo capture is a recommended product capability, even for your criminal transactions. Some states strictly require photo capture with all criminal transactions, and facial matching capability is now in use in some government AFIS systems.

Fed Submit (Mug Shot Add-On) - Continued

Mug shot images are stored in the individuals file and can be viewed in a separate tab from the fingerprints after the photos are taken.

Users can center and capture the mugshot on the live capture screen of the Fed Submit Mug Shot software.

Mentalix’s release verification feature allows you to search the photo against the mugshot database using facial recognition. Once a match is made, the original photo is displayed with the corresponding record information in the table below the photograph. Individual records can then be opened and viewed by clicking on them.
